Keshav Goyal

Full-Stack Developer | MERN & Computer Vision

Kota, Rajasthan, India | goyalkeshav316@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Full-Stack Developer with practical engineering experience in architecting end-to-end web applications and integrating production-ready AI / Computer Vision pipelines. Experienced in developing scalable RESTful APIs, optimizing high-throughput facial search architectures with InsightFace & FAISS, and building modern, privacy-first web systems with Next.js 15 and TypeScript.

TECHNICAL SKILLS

Frontend: React.js, Next.js 15, TypeScript, JavaScript (ES6+), Tailwind CSS v4, Recharts, HTML5, CSS3, Responsive UI/UX
Backend & APIs: Node.js, Express.js, RESTful APIs, JWT Authentication, Email OTP Verification, Middleware Architecture
AI & Computer Vision: Python, InsightFace (ONNX Runtime), FAISS (Vector Similarity Search), OpenCV, NumPy
Databases: MongoDB, MongoDB Atlas, Mongoose, Document Modeling, Aggregation Pipelines
DevOps & Tools: Git, GitHub, Linux VPS, Cloudflare Tunnels, Postman, Vite, Vercel

WORK EXPERIENCE

MERN Stack Developer (Full-Time) — Fotographiya
Aug 2025 – Aug 2026
Kota, Rajasthan (Hybrid)

1. AI Event Photo-Sharing Platform (Core Product — quick.fotographiya.com)

- Co-developed and scaled full-stack event platform using **React.js, Node.js, Express.js, and MongoDB Atlas**.
- Re-architected facial retrieval from request-time scanning to **upload-time vector indexing**, enabling sub-second search response times across thousands of event photos.
- Collaborated on integrating **InsightFace (ONNX Runtime)** and **FAISS** in Python for 512-D vector extraction and vector similarity matching (~98% verification precision).
- Engineered backend security flows, JWT authentication, Email OTP verification, protected routes, and strict selfie input validation.
- Designed asynchronous background workers to process and index high-resolution event media without blocking client requests.

2. Commercial & Wedding Web Platforms (fotographiya.com & wedding.fotographiya.com)

- Built responsive frontend architectures for both main commercial and luxury wedding portals using React and modern CSS.
- Engineered interactive UI components with smooth visual transitions, lazy-loaded galleries, and direct lead generation funnels.
- Implemented structured SEO schema metadata and OpenGraph tags to increase search engine visibility and inbound client inquiries.

MERN Stack Developer Intern — Fotographiya
Jun 2025 – Jul 2025
Kota, Rajasthan (On-site)

- Designed MongoDB database schemas for managing event folders, media assets, and granular user permissions.
- Implemented secure user authentication and onboarding flows using JWT and email OTP verification.
- Developed the initial working prototype for photo retrieval workflows using facial matching logic.

Python Developer Intern — OctaNet Services Pvt Ltd
Oct 2024 – Nov 2024
Remote

- Built Python automation scripts and utility programs to streamline data processing and file handling operations.
- Applied Object-Oriented Design (OOP) principles, data structures, and algorithmic logic to solve programming tasks.

FEATURED PROJECTS

1. Budget Flow — Personal Finance & Expense Tracker
Tech Stack: Next.js 15, React 19, TypeScript, MongoDB, Mongoose, Tailwind CSS v4, Recharts
Links: Live App | GitHub Repository

- **Architected a local-first personal finance platform** featuring instant offline fallback and resilient cloud synchronization using MongoDB Atlas and Mongoose.
- **Engineered an automated monthly budget rollover algorithm** that calculates suggested budget adjustments based on previous spending patterns and budget caps.
- **Integrated dynamic Recharts data visualizations** (Pie, Line, Bar charts) to provide instant visual breakdown of expense trends and category distributions.
- **Guaranteed zero-tracking user privacy** with client-side state persistence and complete JSON data import/export workflows.

2. Fotographiya: AI Face Recognition & Event Photo-Sharing Platform
Tech Stack: React.js, Node.js, Express.js, MongoDB Atlas, Python, InsightFace, FAISS, Cloudflare
Link: Live Platform

- Engineered an AI-powered photo distribution platform where guests upload a selfie to instantly extract their photos from 2,000+ event photos using vector similarity matching.
- Reduced retrieval latency to sub-second response times by shifting compute from slow query-time scanning to upload-time vector indexing.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science Engineering
Sep 2023 – 2027
Government Engineering College, Baran (RTU Kota)
